XIII. EVALUATION

i. Private association	Possible
------------------------	----------

Note

The character of the group remains an open issue. It has been argued that the absence of patronymics in the listed members puts forward the possibility of having a religious association; however, the fact that one of the *tagoi* bears the homonymy to the group name *Simmidas* could point to a *genos* (Decourt and Tziafalias 2001: 147).
