Author: MARIO C.D. PAGANINI

CAPInv. 1967: ktenotrophoi Euhe(merias)

i.	Geographical area	Egypt
ii.	Nome	Arsinoites (00)
iii.	Site	Euhemeria

j	. Full name (original language)	κτηνοτρόφοι Εὐη(μερίας) (P.Ryl. II 183, ll. 10-11)
j	i. Full name (transliterated)	ktenotrophoi Euhe(merias)

i. Date(s)	1 - 16 AD

i.	Name in other forms	κτηνοτρόφοι ktenotrophoi	(O.Fay. 14-15)
ii.	Name elements	Geographical: Professional:	Euhemeria ktenotrophoi

i. Source(s)	P.Ryl. II 183 (6 Aug AD 16) O.Fay. 14 (9 Jun AD 1) O.Fay. 15 (ca AD 1)
Note	The same group may be also attested in: O.Fay. 16 (AD 1), O.Lund. 1 (AD 19), and O.Fay. 17 (14 May AD 35).

	Online Resources	P.Ryl. II 183 = TM 12960 O.Fay. 14 = TM 40858 O.Fay. 15 = TM 40859 O.Fay. 16 = TM 40860
		O.Fay. 17 = TM 40861 O.Lund. 1 = TM 74865
		O.E.M. 1 111 / 1002
i.a.	Source type(s)	Papyrological source(s)
i.b.	Document(s) typology & language/script	Greek orders for donkeys (O.Fay. 14-17 and O.Lund. 1) and a receipt for hay written by the secretary of the <i>ktenotrophoi</i> of Euhemeria (P.Ryl. II 183).

ii. References to buildings/objects	ὄνοι <i>onoi</i> , donkeys	
-------------------------------------	----------------------------	--

iv. Officials	γραμματεύς, <i>grammateus</i> : the mas was called Maron (O.Fay. 14-15, O.Lund. 1, and P.Ryl. II 183). Other secretaries are attested in the other texts: it is not certain that they referred to the <i>ktenotrophoi</i> .

ii. Realty	The members of the <i>ktenotrophoi</i> personally owned donkeys, which they may have managed communally.

ii.	Gender	Men
	Note	Given the character of the membership and their dealings in the business of pack-animals for land transport (donkeys) it is likely that the members were men. The attested members (secretary) bore male names.
iii.	Age	Adults
	Note	Given the character of the membership and their dealings in the business of pack-animals for land transport (donkeys) it is likely that the members were adults.

. Comments	Adams (2007) 182–5 believes that the <i>ktenotrophoi</i> formed a loose cooperation 'in the interest of expediency' only.

i. Private association	Possible
Note	On the basis of the organisation by the group and their durability, it is possible that <i>ktenotrophoi</i> of Euhemeria formed an association. However, lack of specific terminology for association does not allow firmer conclusions. It is in fact possible that the <i>ktenotrophoi</i> only organised themselves as an ad hoc group for business ventures, rather than forming a proper association.
